<p>Service Description</p> <p>This document addresses the use of Romosozumab (Evenity), a drug approved by the Food and Drug Administration (FDA) for the treatment of postmenopausal osteoporosis in a select population of women considered at high risk for fracture.</p> <p>Background Information</p> <p>Evenity is an anabolic agent, similar to Forteo (teriparatide) and Tymlos (abaloparatide), but has a unique mechanism of action. The American College of Endocrinology (ACE/ACE) (2020) osteoporosis treatment guidelines stratify initial treatment based on risk status. For those at high risk/no prior fractures, initial therapy options include bisphosphonates (alendronate, risedronate, or zoledronic acid) or denosumab. For those at very high risk, initial therapy options are denosumab, abaloparatide, teriparatide, romosozumab, or zoledronic acid. Romosozumab may be viewed as a “rescue drug” in the near term and as an option for patients previously treated with abaloparatide or teriparatide.</p> <p>The Endocrine Society osteoporosis guideline update (2020) recommends initial therapy with bisphosphonates (alendronate, risedronate, zoledronic acid, or ibandronate) or alternatively denosumab for those at high risk. Romosozumab is recommended for very high risk of fracture, such as those with severe osteoporosis (low T-score < -2.5 and fractures) or multiple vertebral fractures. Women at high risk of cardiovascular disease or stroke should not be considered for romosozumab pending further study.</p> <p>Osteoporosis may be diagnosed by bone mineral density (BMD) testing indicating a T-score in the spine, femoral neck, total hip or distal 1/3 of the radius of less than or equal to -2.5 as compared to a young-adult reference population. It also may be clinically diagnosed based on a history of a fragility fracture (low trauma fracture). High risk for fracture is defined in the FDA label as history of osteoporotic fracture; or multiple risk factors for fractures; or a failure or intolerance to other osteoporosis therapies. A failure of other osteoporosis therapies, otherwise known as refractory disease, may be defined as a decline in BMD while on therapy (≥5%) or a fragility fracture while on therapy.</p> <p>The original FDA submission of Evenity was denied based on cardiovascular safety findings in the pivotal studies. In response, the indication was narrowed to women at high risk for fracture and a black box warning was added. In addition, there is a lack of long term safety and efficacy data with Evenity; therefore, the label limits treatment duration to one year (12 monthly doses).</p>										

Policy Name	Policy Number	Scope
Romozosumab (Evenity)	MP-RX-FP-32-23	<input checked="" type="checkbox"/> MMM MA <input checked="" type="checkbox"/> MMM Multihealth

The black box warning for Evenity indicates the potential risk of myocardial infarction (MI), stroke, and cardiovascular death. It should not be initiated in patients who have had an MI or stroke within the preceding year and should be discontinued if a patient experiences an MI or stroke during therapy.

Approved Indications

- A. Treatment of postmenopausal women with osteoporosis at high risk for fracture.

Other Uses

- A. N/A

Applicable Codes

The following list(s) of procedure and/or diagnosis codes is provided for reference purposes only and may not be all inclusive. Inclusion or exclusion of a procedure, diagnosis or device code(s) does not constitute or imply member coverage or provider reimbursement policy. Benefit coverage for health services is determined by the member specific benefit plan document and applicable laws that may require coverage for a specific service. The inclusion of a code does not imply any right to reimbursement or guarantee claim payment. Other Policies and Guidelines may apply.

HCPCS	Description
J3111	Injection, romozosumab-aqqg, 1 mg Evenity

ICD-10	Description
M80.00XA- M80.88XS	Osteoporosis with current pathological fracture
M81.0-M81.8	Osteoporosis without current pathological fracture

Medical Necessity Guidelines

When a drug is being reviewed for coverage under a member's medical benefit plan or is otherwise subject to clinical review (including prior authorization), the following criteria will be used to determine whether the drug meets any applicable medical necessity requirements for the intended/prescribed purpose.

Provider must submit documentation (such as office chart notes, lab results or other clinical information) supporting that member has met all approval criteria.

Clinical Criteria: Evenity

A. Criteria For Approval

- i. Individual is a postmenopausal female with the following:
 - A. A diagnosis of osteoporosis (defined as a bone mineral density (BMD) T-score in the spine, femoral neck, total hip or distal 1/3 of the radius of less than or equal to -2.5 as compared to a young-adult reference population OR a clinical diagnosis based on history of a low trauma fracture (fragility fracture) at high risk for fracture;
- AND**
- ii. The individual meets one of the following:
 - A. Individual is at very high risk for fracture as defined by one or more of the following (AACE/ACE 2020):
 - 1. Recent fracture (within the past 12 months)
 - 2. Fractures while on approved osteoporosis therapy
 - 3. Multiple fractures
 - 4. Fractures while on drugs causing skeletal harm (e.g. long-term glucocorticoids)
 - 5. Very low T-score (less than -3.0)
 - 6. High risk for falls or history of injurious falls
 - 7. Very high fracture probability by FRAX (fracture risk assessment tool) (e.g. major osteoporosis fracture >30%, hip fracture >4.5%) or other validated fracture risk algorithm;
 - OR**
 - B. Individual has been refractory to a prior trial of a bisphosphonate; OR
 - C. Individual is intolerant to or has a contraindication to a bisphosphonate as defined by:
 - 1. Hypersensitivity to TWO bisphosphonates (one of which must be alendronate); OR
 - 2. Inability to stand or sit upright for at least 30 minutes; OR
 - 3. Pre-existing gastrointestinal disorders (Barrett's esophagus, hypersecretory disorders, delayed esophageal emptying, atrophic gastritis, etc.); OR
 - 4. Severe renal insufficiency as defined by creatinine clearance less than 35 mL/min for alendronate agents and zoledronic acid or creatinine clearance less than 30 mL/min for risedronate and ibandronate;
- AND**
- iii. Individual has been refractory to, is intolerant of, or has a contraindication to one of the following:
 - A. Prolia (denosumab); OR
 - B. Forteo or Bonsity (teriparatide); OR

Romosozumab (Evenity)	MP-RX-FP-32-23	<input checked="" type="checkbox"/> MMM MA <input checked="" type="checkbox"/> MMM Multihealth
<p>C. Tymlos (abaloparatide); AND</p> <p>iv. Individual is not using Evenity (romosozumab-aqgg) in combination with any of the following:</p> <ul style="list-style-type: none"> A. Prolia (denosumab); B. Bisphosphonates; C. Evista (raloxifene); D. Miacalcin/Fortical (calcitonin nasal spray); E. Reclast (zoledronic acid); F. Forteo or Bonsity (teriparatide); G. Tymlos (abaloparatide); <p>AND</p> <p>v. Individual has utilized Evenity (romosozumab-aqgg) for a total duration of less than 12 months in their lifetime.</p> <p>B. Criteria for Continuation of Therapy: N/A.</p> <p>C. Authorization Duration</p> <ul style="list-style-type: none"> i. Authorization approval: 12 months <p>Requests for Evenity (romosozumab-aqgg) may not be approved when the above criteria are not met and for all other indications.</p>
